Background

• Patient-Reported Outcomes Information System Measurement® (PROMIS) provides standardized pediatric patient reported outcome (PROMIS) measures for children 8-17 years of age, and parent proxies for children 5-17 years of age.

Methods

1. Selection of PROMIS Measures

1) Select health concepts that are most clinically impactful, actionable, and measured by current instruments.
2) Consider what outcomes are important, the precision needed, and the patient/proxy burden to inform measure selection.
3) Engage a wide array of stakeholders in choosing concepts to measure.
4) Make use of expertise from psychometricians and other non-clinicians, as well as PROMIS experts.
5) Use PROMIS Pediatric measures when following young adult patients up to 24 years of age in pediatric clinics.
6) Avoid modifying PROMIS Pediatric forms, items, and wording.

2. Administration

1) Administer measures in a manner that interfaces with the EHR, using shared portal or other means.
2) Use PROMIS Pediatric measures when following young adult patients up to 24 years of age in pediatric clinics.
3) Provide clinicians and other end users with the training necessary to interpret PROMIS scores.
4) Interpretation of PROMIS scores
- Provide clinicians and other end users with the training necessary to interpret PROMIS scores.
